New Developments for the GLOBE-Program in Germany

Dear friends of the GLOBE program,

since 2008 (officially since 2011), we – the GLOBE-Deutschland e.V. association – and I, as the program coordinator, have represented the international GLOBE program (www.globe.gov) in Germany. We took on this out of conviction for the quality of the program and its usability in schools and youth groups in collaboration with many representatives of science and industry and have since then consistently worked on projects in the program.

Due to age reasons, we are handing over coordination to the Science College Overbach and the new national coordinator Annika Loevenich on January 1st, 2024. The GLOBE-Deutschland e.V. association will be dissolved by Easter, we will continue to be active as AG GLOBE-Westphalia as mentor trainers, trainers, project partners and contact persons. Our addresses remain the same. In the future, our communications will be available on the Science College Overbach website. The new center for the coordination of the GLOBE program will be located as GLOBE Germany in Haus Overbach, Jülich-Barmen, a change that we – the board of GLOBE-Deutschland e.V. – are very happy to implement.

We think that the GLOBE program at the Science College Overbach will find a good place for its activities and further development in Germany. We very much hope that there will be continued great interest and good support for the international GLOBE program, from now on represented by GLOBE Germany and Annika Loevenich. We look back with satisfaction on 12 years of GLOBE-Deutschland e.V. and over 20 years of cooperation with the GLOBE program and we look forward to the good future of the program in Germany with similar satisfaction.

Thank you to all for the good cooperation in the last years

Best wishes

Annika Loevenich
